transmit your remote control signal
through walls and ceilings

*Control your VCR, DVD or Satellite Receiver
from your bedroom*

Control appliances in a closed cupboard

*Works for all remote controls,
regardless of brand or model*

MARMITEK

PowerMid XL

The PowerMid XL consists of a transmitter and receiver, shaped like two small pyramids (75x75x110mm). The transmitter picks up the infrared signal of your remote control and converts it into a radio (RF) signal. This signal is transmitted around the entire house, through walls and ceilings. The receiver converts the radio signal to infrared and beams it to your equipment. You can use your own original remote control: all functions are converted one by one. Both transmitter (ST10) and receiver (RE10) are mains powered and are available as individual products also.

PowerMid Dual Power

The PowerMid Dual Power has the same functionality as the PowerMid XL. The design and colour are different. The receiver of the PowerMid Dual Power not only works on the mains, but also on batteries, which is ideal when there is no wall outlet close by. The package contains IR-LED's (RX570), which can be used when you want to place the PowerMid Receiver out of direct line of sight of your equipment. Both transmitter (ST10X) and receiver (RE10X) are available as individual products also.

PowerMid Plus

The PowerMid Plus consists of an 8 in 1 Multimedia Remote Control with a built-in radio frequency transmitter and a PowerMid Receiver. The remote control can be used anywhere in the house: the radio signals are transmitted through walls and ceilings to the PowerMid Receiver. The receiver converts the radio signal to infrared and beams it to your equipment. The remote control also allows you to control the A/V equipment in front of you (via IR). Both remote and PowerMid Receiver are available as individual products also.

The remote control signal is directly transmitted to your equipment by the PowerMid Receiver.

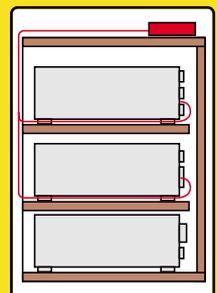

You can use IR-LED's (RX570) to place the PowerMid Receiver out of sight of your equipment.

StereoControl

Do you want to lock away your equipment and still be able to use your remote control? This is possible with the StereoControl. Place the compact IR receiver in line of sight of your remote control. The receiver is connected to IR-LED's, which you attach to you equipment. The StereoControl is powered by a 9V battery (not included).

Marmitek PowerMid works with all brands, except B&O.
